

Implementation Policy

The company attaches great importance for the protection of its employees, sub-contractors and others caused by accidents of fire and from exposure to any condition or substance which might constitute a hazard to health. This protection must be a form of pro-active health, safety and welfare management and relies upon forms of audit and review to ensure any required changes are identified and implemented.

The company's health and safety policy is the first step in the planning of preventative and protective measures necessary to obtain high standards of health and safety. Standards will be set that are measurable, attainable and realistically achievable. Staff, resources and systems will be organised to achieve this aim. Hazards will be identified, risks will be regularly assessed and controlled by elimination, reduction if elimination is not possible.

Suitable and sufficient risk assessments are essential to all areas of work involving significant or foreseeable risk, management must ensure that there is input from the relevant employees, especially the person involved in the work or process. With co-ordination the recorded assessments will identify the measure needed to attain objectives. Areas requiring risk assessments will include but not be restricted to the following;

- Signage
- Fire
- Manual handling
- Working at height
- Plant and equipment
- Electricity
- Noise
- Waste management

The company, where reasonably practicable and appropriate will;

Make uses of advances in technology and technical progress.

Adapt work to the individual rather than visa versa.

Take an in-depth and all embracing approach to health and safety.

Lee Goodwin
Managing Director
